PROFESSIONAL SUMMARY

Software Developer with 2+ years of experience building scalable web applications, AI-powered systems, and cloud-native backend services using **Python, TypeScript, FastAPI, Node.js, React, and AWS**. Experienced in designing type-safe APIs, developing LLM-powered applications with observability, building event-driven architectures, and deploying containerized applications using Docker and CI/CD. Active open-source contributor with merged contributions to projects totaling **80k+ GitHub stars**, demonstrating strong engineering, debugging, and collaboration skills.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript

Frontend: React.js, Next.js, Tailwind CSS, Electron.js

Backend & APIs: Node.js, Express.js, FastAPI, tRPC, RESTful APIs

Databases & Caching: PostgreSQL, MongoDB, Redis, Supabase

ORM: Prisma, Drizzle ORM, SQLAlchemy

AI & LLM: OpenAI API, LiteLLM, Langfuse, Multi-Agent Systems

Cloud & DevOps: AWS EC2, Docker, GitHub Actions, CI/CD

Tools: Postman, DBeaver, Git

EXPERIENCE

Software Developer - BigCircle

Oct 2024 – Present

Gandhinagar, Gujarat

- Designed and developed **type-safe backend** services using **FastAPI, Node.js, TypeScript, and tRPC**, improving API reliability and reducing frontend-backend integration issues.
- Built and integrated **LLM-powered workflows** with **LiteLLM** and **Langfuse**, implementing routing, logging, tracing, and observability to accelerate production debugging and improve AI system reliability.
- Containerized applications using **Docker** and deployed production workloads on **AWS**, establishing repeatable deployment pipelines and improving release consistency through CI/CD practices.
- Collaborated closely with frontend engineers and product stakeholders to deliver scalable, production-ready features across AI and enterprise applications.

Web Developer - Freelance

Aug 2023 – Oct 2024

- Built responsive full-stack web applications using **React, JavaScript, HTML, CSS, and REST APIs** for multiple business clients.
- Designed and integrated third-party APIs and backend services to extend platform functionality while maintaining system stability.
- Worked directly with clients to gather requirements, translate business needs into technical solutions, and deliver projects within aggressive timelines.
- Optimized application performance and user experience through responsive design and reusable frontend components.

OPEN SOURCE CONTRIBUTIONS

[archestra-ai/archestra](#) (3.9k+ GitHub stars) - Enterprise MCP/AI Platform

- The knowledge base lacked support for syncing content from Outline; designed and built a full Outline Knowledge Connector (backend connector, incremental sync with checkpoint management, 17 unit tests, and frontend UI integration), iterating through multiple review rounds to resolve a cross-collection checkpoint correctness bug before merge ([PR #3938](#)).
- Users could not open or download files they had attached to chat messages; diagnosed and fixed the underlying UI bug, restoring file accessibility ([PR #4192](#)).

[tw93/Mole](#) (57k+ GitHub stars) - Mac Cleanup & Optimization Tool

- Contributed fixes for the installed apps cache filter and log cleanup paths, credited by the maintainer in the project's [release notes](#).

[kortix-ai/suna](#) (19.8k+ GitHub stars) - Open-Source AI Agent Platform

- Frontend was experiencing memory leaks; identified and fixed EventSource memory leaks in the frontend API, improving application stability and performance (merged [PR #1560](#)).
- Local development setup was inconsistent across contributors; refactored Supabase CLI usage to npx supabase, improving setup reliability and developer experience (merged [PR #1551](#)).

PROJECTS & CONTRIBUTIONS

Ubik

- Built a **multi-agent AI desktop assistant** using **Python, FastAPI, Electron, PostgreSQL, LiteLLM, Langfuse, Docker, and AWS** to automate executive workflows including scheduling, meetings, and email management.
- Integrated **Google Workspace APIs** and webhook-based automation for Gmail, enabling intelligent email labeling, summarization, and prioritization.

AI-Powered Document Classification

- Developed an **event-driven document processing platform** where Outlook webhooks automatically validated, queued, and processed incoming documents.
- Implemented scalable background processing using **Redis** and **Dramatiq** to maintain responsiveness under heavy workloads.
- Built OCR pipelines supporting **PDF, DOCX, and XLSX**, with **OpenAI Vision** fallback models to improve extraction accuracy on complex documents.

Brandilience

- Designed and implemented subscription payment workflows using **Stripe** before leading a migration to **PayPal** after regional payment restrictions, ensuring uninterrupted customer access.
- Owned the complete payment integration lifecycle using **Next.js, tRPC, Drizzle ORM, and PostgreSQL**, minimizing disruption during migration.

EDUCATION

Bachelor of Computer Applications - Indira Gandhi National Open University (IGNOU)

Expected Jan 2028

- Pursuing part-time, distance-learning degree alongside full-time work as a Software Developer.
- Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks, Software Engineering, Web Development.
